ZACRP4 protein has two complement factor C1q domains. The ZACRP4 gene is located on human chromosome 11q11. The ZACRP4 coding sequence and protein have a number uses described in the specification, including, modulatation of energy balance and cellular metabolic reactions in mammals. In addition, ZACR protein is useful as an autocrine factor, particularly during development, in mediating the processes of an organism, in regulating cellular processes such as cell proliferation and/or differentiation, cell survival and energy balance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         domains,

TANGO 246, tango 275, TANGO 300 and MANGO 245 proteins. The nucleic acids, proteins and protein modulators are useful for treating colonic disorders, inflammatory diseases, tumors, renal disorders, liver disorders, lung disorders, autoimmune diseases, allergic diseases, cardiovascular diseases, brain disorders, degenerative diseases placental, pancreatic, skeletal and muscle

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cc useful for treating or preventing a NOVX-associated disorder such as a cc cardiomyopathy or atherosclerosis, where the disorder is related to cell signal processing and metabolic pathway modulation in a subject, considerably human. The invention is also useful for treating metabolic disorders (e.g. obesity), diabetes, infectious disease, neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease), immune cd disorders, haematopoietic disorders and various cancers. The molecules of the invention are also useful for treating or preventing cirrhosis, cancreatitis, learning and memory defects, infertility, congenital heart defects, acne, hair growth, pigmentation disorders reproductive, health, respiratory disease, gastro-intestinal diseases, reproductive, health, callergy and infilammation, nephrological diseases, urinary system callergy and infilammation, nephrological disorders, neuropsychiatric disorders and age-related disorders.

The present amino acid sequence represents a NOVX protein of the

The invention is also useful for treating metabolic disorders (e.g. obesity), diabetes, infectious disease, neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease), immune considers, haematopoietic disorders and various cancers. The molecules of the invention are also useful for treating or preventing cirrhosis, cancreatitis, learning and memory defects, infertility, congenital heart defects, anne, hair growth, pigmentation disorders, endocrine disorders, respiratory disease, gastro-intestinal diseases, reproductive, health, consultation, disorders, uninary system conversed disorders, neuropsychiatric disorders and age-related disorders.

Cf invention amino acid sequence represents a NOVX protein of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      04-APR-2001
                                                                                                                                                                                                 The present invention relates to cDNAs encoding TANGO 244, TANGO 246, TANGO 275, TANGO 300 and MANGO 245 proteins. The nucleic acids, proteins and protein modulators are useful for treating colonic disorders, inflammatory diseases, tumors, renal disorders, liver disorders, lung disorders, autoimmune diseases, allergic diseases, cardiovascular diseases, brain disorders, degenerative diseases placental, pancreatic, skeletal and muscle
                                                                                                                                                                                                                                                                                                                    Isolated cDNAs encoding TANGO 244, TANGO 246, TANGO 275, TANGO 300 and MANGO 245 proteins, useful in the treatment of inflammatory diseases (e.g. idiopathic ulcerative colitis), tumors, renal disorders and liver
                                                                                                                                                                                                                                                                                                                                                                   WPI; 2001-050127/06

The present invention relates to new NOVX polypeptides. The invention is useful for treating or preventing a NOVX-associated disorder such as cardiomyopathy or atherosclerosis, where the disorder is related to cell signal processing and metabolic pathway modulation in a subject preferably human. The invention is also useful for treating metabolic disorders (e.g. obesity), diabetes, infectious disease, neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease) immune disorders, haematopoletic disorders and various cancers. The molecules of the invention are also useful for treating metabolic disorders (e.g. Alzheimer's disease, Parkinson's disease). The molecules of

the invention are also useful for treating or preventing cirrhosis, pancreatitis, learning and memory defects, infertility, congenital defects, acne, hair growth, pigmentation disorders, endocrine disorders.

Novel isolated NOVX polypeptide useful for treating cardiomyopathy, atherosclerosis, metabolic disorders, diabetes, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease cancer

Claim 20;

Page 214-215; 1963pp; English

CC giving an insight into their probable biological activities, and hence CC potential therapeutic applications. The polypeptides of the invention may CC have various activities, including cytokine, cell proliferation or cell CC differentiation activities; stem cell growth factor activity; have various activity; activity; tissue growth activity; chemotractic or chemokinetic activity; tissue growth activity; chemotractic or chemokinetic activities; haemostatic, thrombotic or thrombolytic activities; receptor or ligand activities; or may be CC involved in oncogenesis, cancer cell proliferation or metastasis. CC Depending on their biological activities, polypeptides and nucleotides of CC chemotractic or their biological activities, polypeptides and nucleotides of CC conditions, e.g., by protein or gene therapy. Such conditions include CC cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell conditions, c.g., chronic inflammatory conditions (e.g., asthma or arthritis), CC proliferative retinopathy, atherosclevosis, coronary heart disease, CC arterial ischaemia, bone disorders (e.g., oronary heart disease, CC arterial ischaemia, bone disorders (e.g., oronary heart disease, CC arterial ischaemia, bone disorders (e.g., oronary heart disease, CC arterial ischaemia, bone disorders (e.g., oronary heart disease, CC arterial ischaemia, bone disorders (e.g., oronary heart disease, CC arterial ischaemia, bone disorders (e.g., oronary heart disease, CC arterial ischaemia, bone disorders (e.g., oronary heart disease, CC arterial ischaemia, bone disorders (e.g., oronary heart disease, CC arterial ischaemia, bone disorders (e.g., oronary heart disease, CC arterial ischaemia, bone disorders (e.g., oronary heart disease, CC arterial ischaemia, bone disorders (e.g., oronary heart disease, CC arterial ischaemia, bone disorders (e.g., oronary heart disease, CC arterial ischaemia, bone disorders, coronary heart disorders (e.g., oronary heart disorders (e.g., oronary heart disorders), coronary heart disorders (e.g., oronary Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby interesting the polypeptides of the invention have homology to known proteins, thereby polypeptide techniques. 127 of the A invention present sequence represents a novel human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Total number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,
                                                                                                                                                                                                                          230
